

ZENITH

AT-11

The Ideal Confine between Earth and Sky

Antica Tuscania

The Zenith^{AT11} roof tile, with its format that is larger than the traditional tile, can cover 1 square metre of roof using just 11 tiles. The benefits in terms of functionality and efficient installation are obvious. The plant producing the Zenith^{AT11} tile, which is made by the Morando workshops in Asti, a company of French group, Ceric, can boast cutting-edge technology that places it at the topmost level in Europe. High technological standards when it comes to machinery, together with carefully selected raw materials and stringent quality controls during production make the Zenith^{AT11} tile a roofing system that can guarantee excellent quality and performance levels.

The Zenith^{AT11} tile is available in naturally coloured clay or engobed versions and it offers a wide range of special pieces such as ridge tiles, end pieces, two-, three- and four-way ridge tiles, ventilation tiles, snow-stopping tiles and roof vents.
